

CPT Code changes for CPT 2016

December 1, 2015

Dear Valued Client:

The American Medical Association (AMA) has made Current Procedural Terminology (CPT) code changes to the 2016 edition of the CPT coding manual.

Quest Diagnostics will be implementing these changes effective January 1, 2016. The enclosed lists the individual tests affected and the appropriate CPT code changes. These tests may also be included in panels or profiles.

In September 2015, Centers for Medicare and Medicaid Services (CMS) announced the possible adoption of new G codes for toxicology and the deletion of G codes that existed for 2015. We will be updating our systems when their decision is finalized.

CPT 2016 changes involve a new AMA Panel 80081 Obstetric Panel (includes HIV testing), a few new molecular testing codes, new GSP codes, changes to Tier 2 molecular codes, additional MAAA tests, and deletion of several methodology CPT codes in the Chemistry section. Additional detailed information will be available on our website.

We appreciate your support and look forward to continuing to serve all of your laboratory needs. We at Quest Diagnostics will make every effort to assist you with the transition to the 2016 AMA CPT coding being used for our test offerings.

Please do not hesitate to call your Quest Diagnostics Sales Representative with any questions or concerns you may have regarding CPT code changes. Or visit our website, QuestDiagnostics.com, for further CPT coding updates.

Thank you very much for using Quest Diagnostics for your laboratory testing needs.
