Warfarin Sensitivity DetectR™ (VKORC1 and CYP 2C9) INFORMED CONSENT

1. What is the Warfarin Sensitivity DetectR test? This test determines the presence of specific variations in the CYP2C9 and VKORC1 genes that confer sensitivity to warfarin.

2. What is the purpose of this test and what are its limitations? Warfarin is the most frequently prescribed oral anticoagulant used for the treatment and prevention of thromboembolic disease. However, it is a difficult drug to manage due to its narrow therapeutic range and inconsistent patient response resulting from inter-individual variability. Genetic information available from this test will help define optimal patient-specific warfarin dosage. Mutations in CYP2C9 and VKORC1 genes are estimated to account for 40%-63% of the variability in therapeutic warfarin dose. This assay is not a substitute for a physician's judgment and clinical experience. Other important factors that may affect dosing should be considered, such as the patient's age, height, weight and co-administered drugs. The test identifies the most common mutations in these two genes, but is not designed to identify some rare mutations.

3. What is required to perform this test? You will be asked to provide 5 mL of blood, which is equal to about one tablespoon. DNA will be extracted from this blood sample and tested. The only discomfort that you may feel is the stick of the needle in your arm. You may also experience a small bruise at the site of the needle puncture. You will also be asked to provide information regarding your medical history, which is necessary for proper interpretation of your test result. In the unlikely event that you should be injured in the course of being tested, your physician will provide any necessary medical care. However, you would be expected to bear the cost of such medical care. Compensation will not be provided in the event of any injury.

4. Is there a cost for this test? This is a routine clinical laboratory test and the results may aid in your diagnosis; thus, you or your health insurer will be billed for this procedure.

5. What will happen to the DNA once the test is complete? The original blood sample will be discarded at the end of the testing process or stored not more than 60 days. The DNA will be retained for a minimum of 6 months. In some circumstances, a patient's DNA may be used anonymously as a negative or positive control sample in future testing, but, in this circumstance, all identifiers will be removed prior to re-testing and the DNA sample and results obtained will remain anonymous.

I understand and agree that my DNA remaining after testing may be stored for up to 6 months should additional testing be required. *Please initial.*

6. How will I obtain results from this test? DNA testing and interpretation of results are complex. The information from this test will be provided in the form of a written report to your physician who will inform you of the results. The laboratory will not provide results directly to patients. Your physician may suggest genetic counseling prior to performing this test or if your results are abnormal. To the extent permitted by law, all of your laboratory records and results are confidential and shall not be disclosed without your written authorization.

Patient Attestation of Informed Consent:

My signature below indicates that I have received information about this test, **Warfarin Sensitivity DetectR™**, and that I have read and understood the material in this document. I have been given a full opportunity to ask questions that I may have about the testing procedure and related issues. I agree to undergo this testing.

 Signature of Parent/Guardian if Patient is a minor

 Print Name of Parent/Guardian

For the Physician:

As the referring physician, I understand the benefits and limitations of this study and have requested that the above-named patient be tested. I attest to the fact that I have provided the patient with the information contained above and fully answered any questions. I believe that the patient understands the information and is voluntarily signing this informed consent.
